1989

household money income for 1990 through 1998 are based on 1989 and 1999 federal census money income data and 1989 through 1999 Bureau of Economic Analysis (BEA) county level per capita income data.

*Preliminary estimates for 2006 are based on the 2005-06 payroll data compiled by the state Employment Security Department and the state total personal income data published by BEA.

**Projection for the year 2007 is based mainly on the Forecast council's September 2007 forecast of total state personal income.

Money income, as defined by the bureau of the Census, includes wage or salary income, self-employment income, interest, dividend, rental income, social security or other public assistance income, retirement, and disability income; etc. It excludes some of the income components of personal income defined by the BEA. For example, employer-paid pension and medical benefits are included in personal income but not in money income. The median measures the point at which half of all households have more income and half have less.
